

Condition Monitoring System  

# WEARwatcher

# WEARwatcher Roadmap

# Why WEARwatcher

## The pioneer

We were the first manufacturer on the market – and with more than 10,000 systems delivered to date, we continue to set the standard.

## Clear recommendations for action

WEARwatcher not only provides data and measurements, but also offers concrete solutions.

## Universally applicable

The system fits in any elevator, regardless of manufacturer, condition, or age.

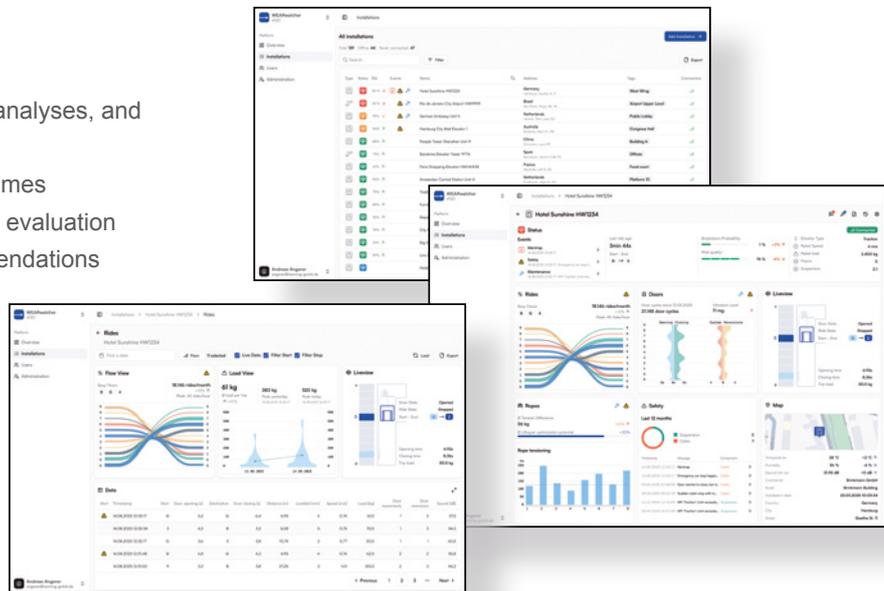

## Advantages

- Capturing the current status
- Error detection / system failure
- Wear detection using AI
- Availability / probability of failure
- Maintenance planning simplifies
- Automatic reporting with recommendations for action for individual systems

## WEARwatcher Cloud

- Central access to all dashboards, trend analyses, and automatic reports
- Makes the unit status transparent at all times
- Links precise sensor data with intelligent evaluation
- Communicates information and recommendations for action in real time

# Two variants – one mission: maximum transparency.

## WEARwatcher<sub>core</sub>

**Fast. Simple.  
Ready to use.**

- Installed in just a few steps
- Core functions for precise analysis
- Ideal for an efficient start

## WEARwatcher

**Comprehensive. Flexible.  
For the highest demands.**

- Multiple sensors can be connected
- Advanced analyses and evaluations
- Absolute clarity regarding the condition of the system

## Your choice

Whether you're looking for a compact entry-level version or full analysis power, both variants provide security and clear recommendations for action.

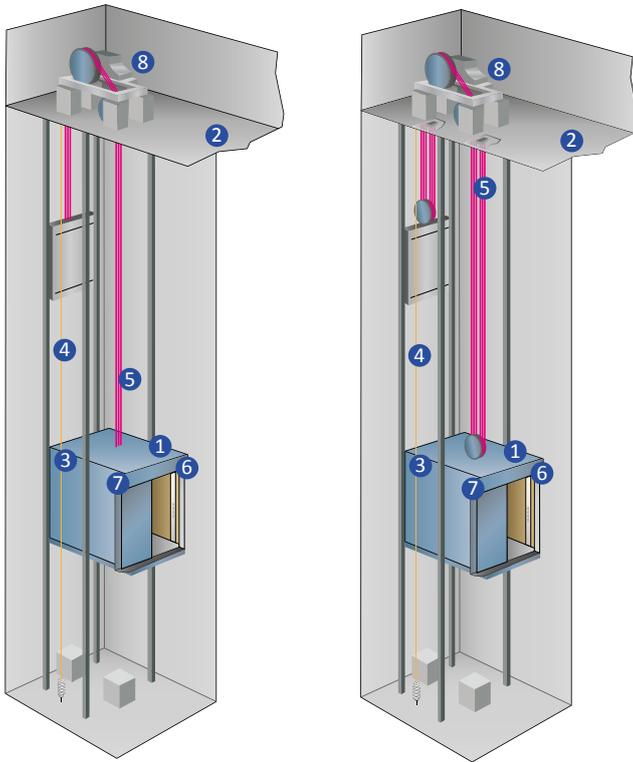

## Partner im Liftlink-Netzwerk

We are a strong partner in the Liftlink network

# WEARwatcher

- 

**1 WEARwatcher MPU**  
Integrated analysis unit, acceleration embedded sensor
- 

**2 WEARwatcher Satellite PEU**  
Pre Evaluation Unit for external sensor data, communication with WEARwatcher MPU
- 

**3 APS Sensor**  
Indication of exact lift position
- 

**4 APS Codeband**  
Indication of exact lift position
- 

**5 Rope Load Sensor**  
Rope tension measurement
- 

**6 Door Signal Switch**  
Indicates door open or closed status
- 

**7 Electric Current Sensor Door Drive**  
Current measurement for door engine analysis
- 

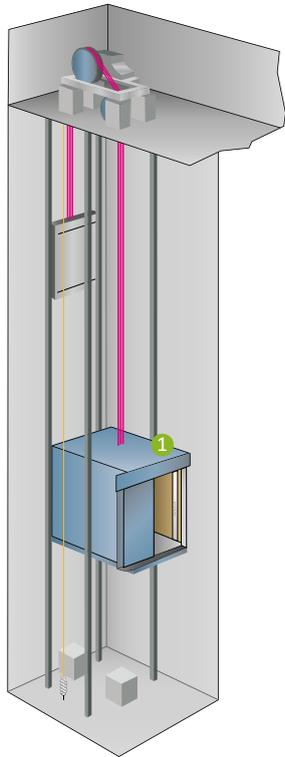

**8 Electric Current Sensor Engine Drive**  
Current measurement for Elevator Engine Status analysis

## Key features

-   $\emptyset$  Speed
-  Duty cycles
-  Ride distance
-   $\emptyset$  Drive time
-  Door cycles
-  Guides
-  Ride quality
-  Number of rides
-  Load conditions
-  Door reversion detection
-  Breakdown probability
-  Drive
-  Vibrations
-  Twisted ropes
-  UCM warning
-  Levelling precision
-  Hoistway doors
-  Wear of rope
-  Elevator Rollback
-  Shaft efficiency
-  Car doors
-  Emergency stop analysis
-  Mantrap
-  Sheaves wear
-  Grooves
-  Traction monitoring
-  Vandalism

„Lifting Elevators & Escalators into the cloud!“

# WEARwatcher core

1

- Easy installation and setup (<30 min)
- Integrated analysis unit with acceleration sensor

# Why WEARwatcher

## ✓ The pioneer

We were the first manufacturer on the market – and with more than 10,000 systems delivered to date, we continue to set the standard.

## ✓ Clear recommendations for action

WEARwatcher not only provides data and measurements, but also offers concrete solutions.

## ✓ Universally applicable

The system fits in any elevator, regardless of manufacturer, condition, or age.
